

Irene Wang is an industrial hygiene consultant who performs qualitative and quantitative exposure assessments for chemical and physical agents. Irene became a Certified Industrial Hygienist in 2022.

At Safex, Irene works with clients in various industries for their occupational health and safety needs. Her projects include industrial hygiene monitoring, qualitative exposure assessment, indoor air quality evaluation, ergonomic assessment, and respirator fit testing. She also occasionally supports general industry safety projects.

Before joining Safex in January 2020, Irene had two internships during her graduate studies. She conducted an overall industrial hygiene workspace evaluation for global manufacturer Saint-Gobain's silicone molding facility. At food manufacturer, McCormick & Company, she worked for the EHS department conducting safety inspections, developing ergonomic pre-screening tools, and updating at-work safety training materials. Irene also has three years of project management experience, partnering with clients from health industries to serve their needs.

Irene earned a Master of Science in Public Health (MSPH) in Occupational and Environmental Hygiene from Johns Hopkins Bloomberg School of Public Health and has a Bachelor of Science in Biotechnology in China. She is fluent in English and Mandarin. She is learning Korean as a third language.

Irene holds an OSHA 30-hour for General Industry certification and has been a member of the American Industrial Hygiene Association (AIHA) since 2019.

As a short-term career goal, Irene plans to further develop her professional skills and get certified as Certified Safety Practitioner (CSP).
